

GRAND POWER

Company profile

GRAND POWER s.r.o. (GP) is a limited liability company established in Slovakia. GRAND POWER engages in design, production and sales of wide range of firearms, firearm parts and accessories and international firearms trade. Production takes place in its two state-of-the art facilities located in Slovenská Ľupča and Kremnické Bane, both privately owned by GP and equipped with modern CNC machines, including robot operated CNC nests. GP's production capabilities also include surface treatment such as QPQ/Tenifer and Elox hard anodizing. GP currently employs over 120 skilled workers.

Established in 2002, GRAND POWER has many years of experience in its field, with satisfied customers from well over sixty countries, including several LEO/MIL entities, such as US SOCOM, Army of Greece and many more.

GRAND POWER s.r.o. holds a valid firearms manufacturing licence as well as a license for trade of military-related material and holds security clearance certificates issued by government authorities of Slovak republic. GRAND POWER also holds relevant ISO 9001 certification.

Most of GRAND POWER products intended for use by armed forces do have NATO stock number assigned as several of our products are in current use by the Armed forces of Slovak Republic as well as other countries armed forces.

GRAND POWER offers a wide range of products, from pistols, SMGs, rifles up to anti-aircraft heavy machine guns, available in most relevant calibres in order to address the needs of our customers.

Every product made by GRAND POWER is based on our very own designs and patents, offering unique solutions and features. GP R&D department is extensive and constantly works on development of new

GRAND POWER

Company profile

The main focus of GRAND POWER is quality; therefore, many quality assurance steps have been incorporated in the manufacturing process. Most steel parts are CNC machined from single piece of high-quality steel, polymer parts are made of durable and resistant GF30 polyamide. Steel parts are QPQ treated for exceptional wear resistance, aluminium parts, made of top quality aluminium, are hard anodized at our own ELOX facility.

The most advanced Swiss ZEISS machines for 3D measuring are implemented for fully automated control of critical dimensions of manufactured parts. Hand deburring and polishing of parts also takes place, adding exceptional level of hand craftsmanship to every GP product. Every single firearm is hand assembled by a skilled gunsmith, who also examines all of the parts he uses for any defects and imperfections.

Every GP firearm is tested and thoroughly inspected after assembly and subsequently test fired, to ensure it is in 100% working order. Firearms are afterwards submitted to government proofhouse, where they are test fired again, this time using overpowered proof ammunition as well as tested for safety and examined for any manufacturing defects. After the proofhouse is satisfied, test protocol is issued and the firearms are returned to GP, where they are inspected again, cleaned and packed for distribution.

But, the best testimony to GRAND POWER quality are users, including sport shooters, who really put our products to test, firing tens of thousands of rounds, submitting the guns to extensive use and rough handling. Our firearms are proudly used by IPSC and IDPA shooters worldwide with lots of success stories, such as several world champion titles.

GRAND POWER is well established, reliable and dynamic partner, offering years of experience and excellent track record.
